HOME EMOM

BEGINNER HOME WORKOUTS

MEN'S + WOMEN'S PROGRAMMES
NO GYM. NO EQUIPMENT. JUST YOU.

12–20 MINUTES

A simple rotating EMOM system for people starting strength training at home.

How it works: Four exercises. One exercise starts each minute. Complete the target reps, then rest for the time left in that minute. Repeat the four-exercise circuit for 3, 4 or 5 rounds.

12 MIN	16 MIN	20 MIN
3 rounds	4 rounds	5 rounds
Starting point	Build consistency	Full session

Important: The 20-minute version is a progression, not a day-one requirement. Start with 12 minutes and add rounds only when movement quality and recovery are good.

WOMEN'S PROGRAMME

Absolute beginner • Emphasis on glutes, hips, legs and core, with upper-body strength included.

Wall push-ups make pushing movements manageable. Hold a wall or sturdy support during lunges if needed.

W1 | GLUTES & CORE

Focus: Lower body + basic pushing + core

1. Bodyweight squats — 10 reps
Comfortable depth; knees track in line with toes.

2. Glute bridges — 12 reps
Pause at the top; avoid arching the lower back.

3. Wall push-ups — 8 reps
Move closer to the wall to make it easier.

4. Dead bugs — 5 per side
Move slowly; keep the lower back gently supported.

W2 | HIPS & LEGS

Focus: Leg strength, hip control and trunk stability

1. Sumo squats — 10 reps
Comfortable stance and range.

2. Standing side leg raises — 10 per leg
Hold a wall; keep toes facing forward.

3. Standing calf raises — 12 reps
Rise smoothly and lower with control.

4. Bird dogs — 5 per side
Reach opposite arm and leg without twisting hips.

W3 | GLUTE FOCUS

Focus: Glutes + accessible upper-body work

1. Glute bridges — 12 reps
Keep ribs down and squeeze glutes at the top.

2. Donkey kicks — 8 per leg
Keep hips level; avoid swinging.

3. Fire hydrants — 8 per leg
Lift without rotating your torso.

4. Wall push-ups — 8 reps
Choose a distance that allows controlled reps.

W4 | FULL BODY & CORE

Focus: Whole-body movement and balance

1. Bodyweight squats — 10 reps
Use a chair behind you as a depth target if helpful.

2. Supported reverse lunges — 5 per leg
Hold support; shorten the step if needed.

3. Wall push-ups — 8 reps
Keep elbows at a comfortable angle.

4. Bird dogs — 5 per side
Move slowly; keep the trunk steady.

MEN'S PROGRAMME

Beginner • Emphasis on chest, shoulders and upper-body strength, while keeping legs and core in the programme.

Start with a push-up variation that allows clean reps. If floor push-ups break down before five, use knee or wall push-ups.

M1 | CHEST & CORE

Focus: Pushing foundation, legs and trunk

1. Push-ups — 5 reps
Use standard, knee or wall variation; stop before form breaks.

2. Bodyweight squats — 10 reps
Control the lowering phase and stand tall.

3. Forearm plank — 15 seconds
Keep hips level; use knees-down plank if needed.

4. Superman raises — 8 reps
Lift gently; keep neck neutral.

M2 | SHOULDERS & LEGS

Focus: Shoulder control, legs and posterior chain

1. Pike push-ups — 4 reps
Use a small range; substitute wall push-ups if too difficult.

2. Reverse lunges — 5 per leg
Short, controlled step; hold support if needed.

3. Glute bridges — 12 reps
Pause briefly at the top.

4. Prone W raises — 10 reps
Draw elbows toward ribs and squeeze shoulder blades.

M3 | UPPER BODY & BACK

Focus: Chest, upper-back activation and core

1. Push-ups — 5 reps
Choose a variation that keeps every rep controlled.

2. Prone W raises — 10 reps
Keep shoulders away from ears.

3. Reverse snow angels — 8 reps
Move slowly; lift only as high as comfortable.

4. Dead bugs — 6 per side
Keep movement slow and controlled.

M4 | FULL BODY STRENGTH

Focus: Push, legs and conditioning

1. Push-ups — 5 reps
Use a suitable variation; leave a little in reserve.

2. Bodyweight squats — 12 reps
Keep heels grounded and move smoothly.

3. Reverse lunges — 5 per leg
Use support if balance is challenging.

4. Mountain climbers — 8 per side
Slow step-in version is fine; keep shoulders over hands.

HOW TO TRAIN & PROGRESS

The EMOM format

Minute 1: Exercise 1. Minute 2: Exercise 2. Minute 3: Exercise 3. Minute 4: Exercise 4. Repeat from minute 1 until the session ends. Finish reps with good form, then rest for the remainder of the minute.

Start	3	12 min	First sessions; learn movements.
Build	4	16 min	When 3 rounds feel manageable.
Progress	5	20 min	When 4 rounds are completed with good form and recovery.

Weekly rotation

Option A: train Monday, Wednesday, Friday and Sunday, using W1–W4 or M1–M4 in order. Rest or take an easy walk on other days. Option B: train two days, then take one rest day. Adjust based on recovery.

Warm-up & safety

Warm up for 3–5 minutes: march in place, shoulder circles, hip circles and easy squats. Move at a pace that allows controlled breathing. Stop if you feel sharp pain, dizziness, chest pain or unusual shortness of breath. People with injuries, significant health conditions, or pregnancy/postpartum considerations should get appropriate professional guidance before starting.

Equipment-free training limitations

Prone W raises and reverse snow angels train upper-back control, but do not provide the same progressive pulling resistance as rows or pull-ups. For balanced long-term back and biceps development, a safe pulling option may eventually be useful.

What these workouts can and cannot do

Core exercises strengthen the waist muscles but cannot selectively burn waist fat. Changes in body fat depend on overall activity, nutrition, sleep and consistency. Glute and hip exercises strengthen those muscles; visible changes take time and progressive training.

Keep it simple. Show up. Build strength one minute at a time.
